

Maths

Today we are going to play a treasure hunt game! You need one other person to play with. You each need a chart like the one below. There is one provided in the resources section or you could draw your own. You also need 3 coins (treasure!) each. Hide your chart so no one can see it. Now place each coin in one square on your chart.

4				
3				
2				
1				
	A	B	C	D

Take turns to guess where your opponent has hidden their treasure e.g. square C3, square A1. The winner is the first person to find all of their opponent's treasure! Good luck!

Literacy

Imagine you and your family or friends are on a voyage when suddenly your ship meets a storm! You become shipwrecked on an island! Think about what you would need or what you would take with you if you had the chance to choose.

Write a list of the most important things you would need, no more than 10. Choose carefully!

Foundation Subject – creative

Imagine if you had your very own island! What would you like to have on it? Would it have any special buildings? Maybe a river, mountains, caves or a volcano? What would grow there – your trees could grow unusual things! Draw a map of your special island. You might like to use the template provided in the resources section.

Give your island a special name and you might like to write labels for the special features on your island. It can be as weird and wonderful as you like! Have fun!
